

WRITING PIECE 1

As we continue to explore new approaches to education, one concept that is gaining traction is the idea of shorter school days. While this may seem like a radical departure from the traditional model of schooling, there are many compelling reasons why reducing the length of the school day could be beneficial for students, teachers, and families alike.

First and foremost, shorter school days can lead to improved academic performance. Studies have shown that students who are well-rested and have time for activities outside of school are more engaged and productive in the classroom. With shorter school days, students would have more time to pursue extracurricular activities, explore their interests, and engage in self-directed learning. This could lead to a more well-rounded education and a deeper sense of personal fulfillment. In addition to academic benefits, shorter school days could also have a positive impact on students' mental health.

With less time spent in school, students would have more time to relax, recharge, and engage in self-care activities. This could help to reduce stress, anxiety, and burnout, which are all too common in today's high-pressure educational environment. Of course, some may argue that shorter school days would be detrimental to student learning and development. They may point to the fact that other countries with shorter school days have lower academic achievement as evidence that this approach is flawed.

However, it's important to recognize that every educational system is different, and what works in one country may not work in another. Furthermore, there are many factors that contribute to academic achievement beyond the length of the school day, including teacher quality, curriculum design, and student motivation. In conclusion, while the idea of shorter school days may seem unconventional, there are many compelling reasons why it could be a positive change for students.

By reducing the amount of time spent in school, we could create a more balanced and fulfilling educational experience that supports academic achievement, personal development, and mental health. It's time to rethink the traditional model of schooling and explore new ways to support student success.

WRITING PIECE 2

Shorter School days.

Sweat was dripping down my face, waiting for the school bell to save humanity. It has been a long day for all of us. I felt fatigued! In my opinion, school days need to be shorter. Firstly, short school days can reduce our stress. Children need to have a break from an exhausting day of school. They are tired and overworked from lots of hours of learning.

Secondly, if we have shorter school hours, children will still have vitality and spirit to play games, sports and other activities like drawing, music and crafts. They are still energetic and can play more. Thirdly, the teacher can focus on the most important topics in school and more engaging methods, so they don't waste time.

Therefore, shorter school days can have positive outcomes. The kids can have better rest, have time to try different activities and the teachers can improve their quality of education.
